AMMONIUM POLYPHOSPHATE LIQUID

10-34-0

GUARANTEED ANALYSIS

Total Nitrogen (N) .......................................................................................................................... 10.0%

10% Ammoniacal Nitrogen

Available Phosphate (P₂O₅) ........................................................................................................ 34.0%

Derived from Ammonium Phosphate.

PHYSICAL CHARACTERISTICS

Weight per gallon at 68°F (20°C) .................................................................................................................. 11.6 lbs.

Gallons per ton ......................................................................................................................................................... 172

Pounds N per gallon .................................................................................................................................................. 1.16

Pounds P₂O₅ per gallon ............................................................................................................................................ 3.95

Percent of total P₂O₅ in polyphosphate form ........................................................................................................ 65

Percent of total P₂O₅ in orthophosphate form ....................................................................................................... 35

Viscosity cps at 60°F .................................................................................................................................................. 48

Salting out temperature ......................................................................................................................................... 28°F

pH ........................................................................................................................................................................... 6.2

Pressure and Volatility .......................................................................................................................................... None

CONSTRUCTION OF STORAGE & TRANSFER EQUIPMENT

1. Tanks: 10-34-0 can be stored in regular mid steel tanks and certain fiberglass tanks. Aluminum tanks can also be used. However, aluminum tanks are not recommended for prolonged storage.

2. Pumps: Any pump recommended for use with liquid fertilizers. Remember the basic rule of “no brass.”

USES

1. Is an excellent source of water soluble, fast acting ammonium phosphate with the most desirable ratio of N:P₂O₅.

2. An ideal source of phosphorus and nitrogen in complete liquid mixes.

3. For specific application rates follow the recommendation of a qualified individual or institution, such as, a certified crop advisor, agronomist, university crop extension publication, or apply according to recommendations in your approved nutrient management plan.

ADVANTAGES

1. Contains all its nutrients in 100% water soluble forms.

2. Nonvolatile and safe to handle.

3. Liquid means no bags to lift, break or dispose of. Pumps or simple gravity do all the work.

4. The ideal ratio of N:P₂O₅ is a proven, superior fertilizer when band injected for crops such as tomatoes, sugar beets, corn, cotton, small grain and finer vegetable crops.

5. Compatible with most other liquid fertilizers. NOTE: 10-34-0 is not compatible with aqua or anhydrous ammonia.

SAFETY

10-34-0 liquid having a pH of 6.2 is a relatively safe product to handle. For your protection, wear goggles to protect eyes.

Avoid contact with eyes and clothing. In case of contact, flush eyes and skin with plenty of water.

Warning: This product contains a chemical known to the State of California to cause cancer, birth defects or other reproductive harm. Proposition 65, the Safe Drinking Water and Toxic Enforcement Act of 1986, requires notification of potential exposure to substances identified by the State of California as causing cancer, birth defects or other reproductive harm.
